
Github - Procedures

The purpose of this document is provide guidance for common github commands so we can efficiently commit changes from the command line.

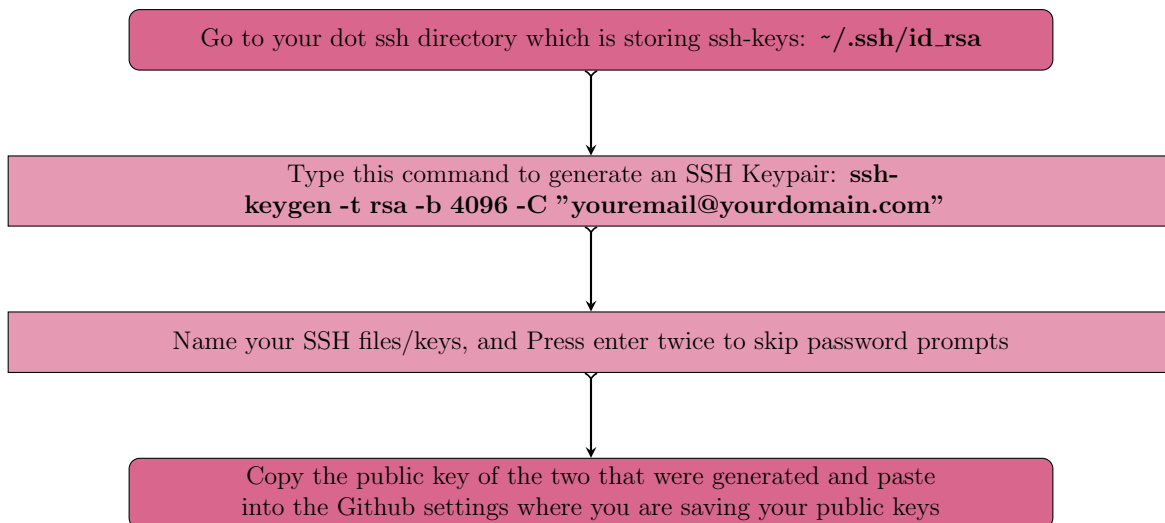

Creating Local Repository and Connecting to Remote Repository

Cloning a Github Repository

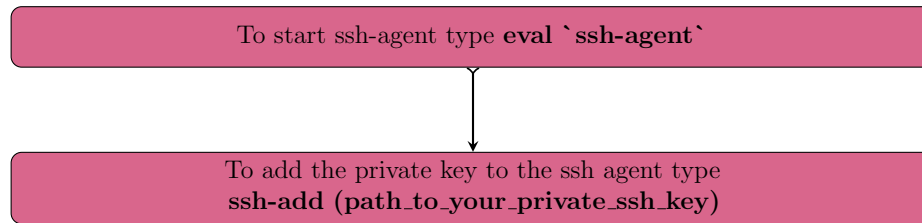

Creating SSH Keys for Authentication Protocol

Initialise SSH-Agent and Add Private SSH Key To Key Chain

This process can also be automated using shell scripts or adding the shell commands to a config file to ensure ssh-agent process is initialised and the relevant key is pathed into the keychain.

Commit Changes to Github Repository
